Clinical Research Support Centres

Due to the fact that in Poland we are not making use of the full potential of clinical research, which can be confirmed by a low number of non-commercial clinical studies (in 2019, 603 clinical studies were entered to the Central Register of Clinical Trials, and only 15 of them were the trials by non-commercial sponsors), the Medical Research Agency has undertaken a number of activities that support removal of barriers in clinical research development.

One of them is the project of creation of specialised Clinical Research Support Centres that would function in shared services model, ensuring complex and systemic support for implementation of both, commercial and non-commercial research.
