## Participation of patients from Ukraine in clinical trials conducted in Poland

Securing clinical trial participants - recommendations in connection with the ongoing war in Ukraine  
The war in Ukraine and the current dramatic situation require us to provide quick and emergency solutions. Due to the current situation in Ukraine, many Ukrainian clinical trial participants have lost the possibility to continue their treatment, which may pose a serious health risk for them in many cases...

In view of the above, the Medical Research Agency, in cooperation with its partners, has developed recommendations on taking joint action to allow patients - participants of clinical trials to continue participation in trials, including the use of innovative therapy within the framework of projects conducted in Poland.

The recommendations will be updated according to current needs.
