University of Opole

The University Clinical Trials Support Centre (UniCTSC) in Opole is a consortium project of University of Opole (UO) and University Clinical Hospital in Opole (USH). In total, the Centre comprises 16 hospital wards and clinics with investigators and research staff of many different specialisations. The UniCTSC constitutes an excellent environment to initiate and handle clinical trials thanks to its innovative organisation model in terms of staffing, timelines, quality systems and IT for feasibility studies, trial management, trial budget administration, and validity alerts for certificates, servicing, technical passports etc. The Centre's infrastructure brings together patients, sponsors/CROs, as well as administration and research staff in one place and allows immediate communication with the hospital, pharmacy, and laboratories.

Principal advantages:

- Between 2010 and 2020, the Centre performed 52 clinical trials, principally in the field of cardiology.
- Clinical trials in cardiology and lifestyle diseases.
- Specialist hospital clinics and an R&D unit Center for Research and Innovation in Civilization Diseases - Cardiovascular Diseases and Spine Diseases.
