Voivodeship Multi-Specialist Center for Oncology and Traumatology in Lodz

The mission of Voivodeship Multi-Specialist Center for Oncology and Traumatology in Lodz is to ensure the highest standards in medical prevention, health awareness, diagnostics, and multidisciplinary treatment. Establishing an Oncology Clinical Trials Support Centre (OncoCTSC) will make it possible to efficiently implement effective and comprehensive solutions for conducting clinical trials and incorporating their findings into clinical practice, increasing the facility's research potential in oncology. The Centre will constitute the only venue in the voivodeship capable of applying such a versatile and comprehensive diagnostic and therapeutic approach, including CAR-T therapies. The clinical trials performed so far focused on oncology, haematology, cardiology, neurology, internal medicine, and paediatric allergology (including respiratory conditions, cystic fibrosis, and immunity disorders in patients under 18 years of age).

Principal advantages:

- More than 20 years of experience in clinical trials and highly qualified staff.
- The Centre is currently involved in 68 international trials, of which 58 are focused on hemato-oncology.
- 34 hospital wards (917 beds) and 58 clinics and specialist laboratories.
- Sophisticated diagnostic equipment available onsite, including certified PET-CK, SPECT-CT, CT, MRI devices and radiotherapy accelerators.
